

Signaline WD

Water Detection Cable

Rapid water detection

Up to 1000m per zone

4 cores with a nylon outer braid

Pre-terminated lengths for plug and play installation

Signaline

Model	Signaline WD-*
	*required cable length as per lengths below
Diameter	6mm nominal
Lengths	3.75m / 7.50m / 15.0m / 30.0m / 100.0m
Construction	4 core (2 x black water detection cores, 1 x blue and 1 x red circuit voltage and power)
Outer sheath	Clear coloured nylon braid

Signaline WD Water Detection Cable is a unique 4 core twisted cable that is tightly bound in a nylon fish net braid, enabling water to easily come in contact with the sensitive elements of the cable.

Two of the cores provide low voltage and low current power to the circuit while the other 2 cores are sensitive to the presence of water.

Signaline WD Water Detection Cable is supplied in a selection of pre-terminated lengths that are plugged together to make up the required length of cable.

An end of line plug is connected at the end of the Signaline WD Water Detection Cable to complete the sensor circuit.

Water must submerge the cable to a depth sufficient enough to come in contact with both black cores for an alarm to be triggered. This allows for fast reaction to a flood event while minimising false alarms.

Signaline WD cable is proudly
manufactured in the UK
